Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
1/31/26	3	Other	Had issues logging onto Brightspace due to MFA. Had to contact support and have MFA reset.	Support was very a bit slow but was finally able to access Brightspace	Realised I had missed a Zoom Session.
1/31/26	4	Research, Training, Learning	I scoured Youtube for help on my projects implementation	I found out there will be alot of hurdles	I should contact Prof. Chuang for a bit of guidance as well.
2/1/26	8	Supervisor Discussion	I met my supervisor and went over whether or not this project could be delivered in the time constraints of the semester	It will be tough and I might have to compromise on some features	I should catch up on project basics due to my late arrival back to the US
2/3/26	6	Design	Did a deep dive into the semantics and design behind a ride hailing service.	It was a very long and tedious process to go through so many feature and back ends	I should have done the design and research during my winter break.
2/4/26	4	Other	Had to revisit a lot of the research and again decide what to tackle first.	I was overwhelmed by the amount of work required	I should have done this project as a group
2/5/26	4	Research, Training, Learning	Researched on the Google Maps API	It is very confusing	I should discuss this with my supervisor.
2/6/26	5	Supervisor Discussion	Discussed the different approaches I could take and their feasibility	It was exhausting and lengthy	I should just dive straight in and tackle each problem as it comes.
2/9/26	2	Supervisor Discussion	Met with supervisor, helped me with some hardware issue	Supervisor told me that they are going out of the US on the 17th	Will need to take time out and schedule meetings with them according to their timezone on the future
2/9/26	2	Other	Thought about my projects timeline. Made rough estimates	Very overwhelming to provide a prototype by my presentation slot	Will need to make more time in the future.
2/10/26	3	Coding	Did some Webpage coding for the front end	Had to look up alot of JavaScript	JavaScript and HTML very different in implementation
2/10/26	2	Research, Training, Learning	Went through many Youtube videos on JavaScript coding	Very slow and boring	JavaScript is better for user experience as far as I understood
2/11/26	2	Design	Looked up front ends of different sites	Too many designs for front end	Should decide a user friendly theme
2/13/26	2	Documentation	Did a bit of writing for the Slides Assignment	Very Lengthy Assignment	Should make time for it while in Virginia
2/16/26	3	Supervisor Discussion	Got a bit of time with my Supervisor to discuss a few issues I faced in the script	He helped me out a lot but he could not give me a lot of time as he had a flight the next day	Supervisor is leaving tomorrow early morning but he has told me that he would be available for me
2/16/26	3	Other	Worked on the Slides assignment	Don't think I will be able to submit my assignment on time	I should have been more proactive
2/17/26	2	Documentation	Got a few hours to write down the implementation of my project before I left back to NY.	Still not done with the Slides Assignment	Should take a look at the Course Calendar to avoid this going forward.
2/23/26	2	Research, Training, Learning	Researched which AI tools could be used for creating logo and brand designs.	There is a influx of AI tools some are only marketed really well while some are good but not that well known	There is a alot of research that has gone behind AI building and it is getting better with every update.
2/23/26	2	Coding	Started coding the script for the webpage	The script I wrote for the web application backend did not work properly	I should practice python more and take some time to go through scripting basics for a more in depth understanding.
2/24/26	2	Design	I used AI tools to design the logo for BoroughBound	It took a lot of specific prompting to get close to what I envisioned in my mind	AI tools work as good as the set of instructions it receives.
2/25/26	3	Coding	Continued work on frontend web application pages	I was able to write parts of the index and admin web page	I found HTML and JavaScript to have similarities. CSS is very versatile if you know what you want to do.

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
2/26/26	2	Research, Training, Learning	Looked up a few things mainly how to implement a 3D effect when the mouse pointer hovers over a button on the web page.	I was able to implement this	It was a very confusing process.
2/27/26	1	Coding	Worked on 2 other web application pages the driver page and reservation/rider page.	I had to use place holders for the script integration parts in the HTML code. Need to work on the script now	Found it hard to come up with placeholder names and specify indications for myself in the HTML code of the pages. I hope it will be easier to integrate the script later on.
2/27/26	2	Testing & Debugging	Tested the 4 web pages I had coded.	There was a weird thing that would happen sometimes when i opened the web page. I used to be presented with the HTML code rather than the Visual application. Happend rarely but i did face this.	Could not figure out why i was presented with the HTML code rather than the rendered Web Application. Will need to lookup this up on the internet.
3/1/26	2	Documentation	Designed and wrote the basic database schema for BoroughBound. Updated the Timelog.	Need to research and work on the script for the Web Application.	I have had issues managing project work load. I need to work on my scheduling of tasks.
3/2/26	3	Research, Training, Learning	Did script research again as last script i wrote did not work	Still need to work on the script	It is very hard not as easy as it seems
3/3/26	2	Documentation	Jotted down a few things that I could do differently	Backend is confusing	I should talk to supervisor about Script issues
3/5/26	3	Design	Did a bit of updating to the frontend design elements	Need to focus more on backend going forward	I enjoy frontend work more than backend.
3/6/26	5	Supervisor Discussion	Got to discuss the issues i faced with Script implementation	Supervisor suggested starting writing a new script altogether starting form the basics to avoid issues.	I was more confused after the discussion
3/7/26	2	Coding	Did a bit of SQL code	Not as hard as it seemed	SQL is very good for databases
3/8/26	4	Testing & Debugging	Ran into some trouble testing SQL code I wrote also fixed issues with the logo not appearing on html pages.	SQL code was correct I was not implementing it properly	Image location should be entered exactly as it is stored on a system
3/10/26	3	Supervisor Discussion	Supervisor was nice enough to again help with the Scripting and gave inputs on Webpages.	Suggestions should be considered	I have been lazy. Should manage my time better.
3/10/26	2	Research, Training, Learning	Had to lookup a few things for the script. Watched a couple Youtube videos. Very helpful	Videos were very informative but bland. Hard to keep focus	Should review the tutorials again
3/12/26	2	Design	Had doubts so I made a few adjustments to frontend design	Design elements are nearly done	I should not obsess over minute details
3/13/26	3	Coding	Worked on driver.sql and script.	ran into an issue with sql	should check why sql file not working
3/14/26	2	Testing & Debugging	Spent time tracing my issues in the driver.sql file	could not figure out what i did wrong	I should scour the internet maybe someone had a similar issue
3/14/26	1	Documentation	Wrote down what i have done and what needs further work	I should be done with a fairly working backend by mid April	I should focus on backend after I am done with my midterms
3/15/26	2	Other	Worked on Peer Evaluation	Had a hardtime getting in touch with my Peer Evaluation pair	Should have contacted my Peer Evaluation pair as soon as the pairs were announced. Would have been less anxious if I had been proactive
3/16/26	2	Supervisor Discussion	Had a good overall review with my Supervisor	He had a few more ideas for me	His ideas seem hard should break them down so that I can see if they can be implemented by me

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
3/17/26	3	Design	Spent some time going back and forth with the layout of my website	Don't think I still like the overall design	I am spending a lot of time on the design
3/18/26	5	Coding	Went over my script	still very buggy	should get help for script from my supervisor
3/19/26	4	Testing & Debugging	Tested the script	ran into many issues again	scripting is very hard
3/21/26	3	Research, Training, Learning	For script I again needed to research alot	Still haven't been able to understand the problem	Should contact supervisor
3/23/26	2	Documentation	Noted my work and went over my timeline	still have time should be able to complete by deadline	Solo Projects are very hard
3/24/26	2	Research, Training, Learning	Spent time going over a few things I thought could need a refresher i.e. SQL and Script	Getting a refresher on a few key rules was good	I feel I should write down the key rules for SQL and Script in my notebook
3/25/26	2	Other	Had to update my timelogs and started working on updating my slides	I did not save my slides and had to do a few again	I should have saved my slides after making changes to them
3/27/26	3	Supervisor Discussion	Went over my script with Supervisor	Supervisor was helpful identified a few mistakes I made	Should fix mistakes pointed out by Supervisor
3/28/26	2	Coding	Worked on fixing the script	I have not been able to fix all mistakes	Debugging the script is hard
3/29/26	3	Other	Spent more time working on the Slides	took more time than expected	Working on Slides is a very tedious task
3/30/26	3	Design	Went back and forth with Website pages layout	I am close to my desired layout	I am overall satisfied with the way the web pages look
3/31/26	2	Supervisor Discussion	Talked to my supervisor and showed him my current webpages	He suggested me to rearrange a few things	The suggestions he gave were noted and I could probably do those. We will see
4/2/26	4	Coding	I implemented a few changes suggested by my Supervisor	I accidentally closed my webpage thankfully changes were saved	I should be more alert while making edits to code
4/3/26	4	Testing & Debugging	Tested my new webpages and tried to debug script	webpages worked fine but the script is still in progress	script still needs a bit of work
4/4/26	2	Research, Training, Learning	looked up and tried to find help on script issues	found a few interesting things	should ask supervisor again
4/5/26	3	Documentation	wrote down all the issues I have faced with the script	it was hard to remember exactly what went wrong	should have done this as I faced them so that I did not have to spend so much time now
4/6/26	3	Supervisor Discussion	Told my supervisor the issues im still facing in regards with the script	Supervisor suggested that I write a new script but this time also noting down exactly what I did and where so that I may be able to understand where I went wrong	he too thought that i should have noted the issues as they arised rather than later
4/7/26	2	Design	A friend I had sent the webpages to, thought that I could do better so I went back and made a few adjustments	I should get another opinion	I feel like I am second guessing my self now
4/8/26	2	Research, Training, Learning	Spent a little time on the internet just watching a few videos on scripting	Could approach my script in a different way than I had previously done	seems easy when someone else is doing it but when I do it it just doesn't seem to click
4/9/26	2	Coding	Wrote a new bare basic script	It is not complete should take time out and give it my all	seems redundant starting from scratch in a way. I should also try debugging my original script what if I can fix it
4/10/26	2	Testing & Debugging	Went over my script	I should try breaking it down in parts	I need to take more time on it
4/11/26	2	Documentation	Noted down all common mistakes made while scripting	Should now check against my original script	I have started falling behind my intended timeline. This is very disappointing

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
4/12/26	4	Other	Spent time fixing slides and my webpages for my Second Demo Recording. Made finishing touches to my timelogs.	Demo Recording was hard. I kept jumbling up words.	I spent a lot of time making the Second Demo Recording. I think it was relatively good. We will see
4/13/26	2	Other	Made a plan on what to do for the SQL files and Script. I jotted down all the data that I thought would be needed.	Took a lot of time but now I just need to implement my planned data sets.	I think I should just do away with the Server Script. Lets see
4/14/26	2	Supervisor Discussion	Had a very productive talk with my supervisor. He was in agreement with my plan.	He suggested to keep the Server Script.	The Scripting part has been very hard and I personally think I should not waste anymore time on it.
4/15/26	3	Research, Training, Learning	Went back and did a bit of a research for the SQL implementation.	I should start on the SQL files.	SQL is easy in comparison to the Server Script in Python.
4/17/26	2	Coding	Worked on and finished the driver data, trip data and passenger data sql files.	Still a few SQL files are needed.	I am satisfied with my progress for now.
4/18/26	3	Testing & Debugging	Debugged the script I wrote or I should say tried to the best of my ability	It is still a work in progress for now. Need to complete it by the last submission date.	I might have overestimated my self.
4/19/26	2	Documentation	Added a few slides on the other Web Pages to the Presentation.	Not that hard but I Slide deck still needs alot of work.	Everything is going according to the plan except the progress on the Script. Should focus on it.
4/24/26	2	Design	Made a few changes to the overall formatting and positioning of the Presentation Slides. The design is still consistent to the overall theme of the Project.	Need to update the timelogs.	A lot of time was spent focusing on the midterms but I need to get back on track now.
4/25/26	3	Other	Did a thorough examination of the general expectations for the final Presenation Slides that Professor Chuang provided.	According to the requirements I have a lot of work to do.	I need to spend more time working on the Presentation Slides as well. At least need to have 30 slides that fulfill the expectations given.
4/26/26	2	Testing & Debugging	Tested various queries on the SQL files. They worked sufficiently well.	Need to work on the remaining tasks planned. SQL - Server - Slides.	I should have been on top of things. I feel like I am falling behind schedule.
4/27/26	3	Coding	Worked on and sucessfully completed the Vehicle data, ratings, addresses data and the schema in SQL. Worked on the Server as well.	Should talk to my Supervisor, did not get a chance last week due to Midterms.	I am happy that at least I am done with the SQL and almost done with the Server file.
4/29/26	3	Supervisor Discussion	Told supervisor about my progress till now and sent him the SQL files, he was satisfied with them. I asked him whether i should just leave the Server file as is but he motivated me to keep working on it.	Slides and Server file need to be worked upon.	I am doubtful that I will be able to fix the Server file on time. I might have to compromise on either the slides or the script.
4/30/26	3	Research, Training, Learning	Searched and worked on the Script side by side. Looked for good tips on implementing the server and hit a few dead ends but I was able to make it workable for now. The Server file can be run locally so that is good for now.	Need to add comments and instructions as suggested by the tutorials to the Server file.	Although I am relieved the Script is functional, I am confused whether or not to commit it to Github.
5/1/26	3	Documentation	Made additions to the slide deck and began adding comments to the Server file.	A lot of work is still left in regards to the Server and Slides.	I am hopeful that I will be done by Submission date.
5/2/26	3	Design	Went back and forth on the slides. Added before and after for the Web Pages and SQL Schema.	Still need to make a few tweaks to Server.	I should stop obsessing over minute details of the Server and focus on the overall completion of the Project.
5/3/26	2	Other	Did a few tasks. Updated the Timelogs uptill today. Did a bit of research on running the server locally. Added that information as comments within the Server file just in case.	Need to finish up the Presentation slides but also need to add a bit more detail in the comments for the Server.	I am mentally exhausted from going over and over tracing the Server script.

Date	Duration (hours)	Category	Description of completed task	Challenges and/or next steps	Reflection
5/5/26	3	Supervisor Discussion	Went over all the changes I had made since the first version of the Web Pages and the Slides up till now. Let him know that I still had a bit of additions to make to the Final Presentation Slides. It was sort of a complete project walk through over Zoom.	I was a bit hesitant to showcase the project as I did not feel as if it was perfect yet. I also should have recorded the zoom session would have helped me with final demo recording.	There is always room for improvement and I think that I should have done more.
5/6/26	3	Testing & Debugging	I worked on the server file. Tried debugging a part I thought would help, it did not.	It was very tricky as I am not very good with Python.	I should add more comments so that it is better to convey what i am trying to achieve via the script.
5/8/26	4	Other	I was working on the Presentation Slides. Added a few more slides showcasing the SQL files I wrote.	I need to continue working on the comments in the server file.	All the code is very straightforward but I think adding instructions to run the server file will help anyone that view the project on Github to run it locally(hopefully).
5/9/26	2	Documentation	Continued adding instructions as comments for better readability and tracing. I am almost done with the instructions for Server and a clear readme for the project.	The presentation slides need to be worked upon. They are currently not meeting the expectations Professor provided.	I really need to manage my time properly.
5/10/26	4	Documentation	Majority of the time was spent just going over the whole project and changing a few commands in the server file. I added a more detailed explanation so that anyone that views my project on Github would be able to understand the project. I made a few final tweaks and changes to prepare my Presentation Slides for Submission. Lastly finished up on these Timelogs.	Now I just need to relax and record the Final Demo Recording.	Although I had to drop the mobile app from the scope of this project I am confident in the work I have done. I was really anxious and stressed at times but I think this was a very fun experience overall.
